1. A bag pack comprising:

a plurality of bags including a first bag and a second bag, wherein the plurality of bags are associated in a nested configuration such that upon extraction of the first bag from the bag pack, the second bag is automatically available for use.

5:

- 2. A bag pack as recited in claim 1, wherein the nested configuration comprises a series of inter-inserted bags of the plurality of bags.
- 3. A bag pack as recited in claim 2, wherein the nested configuration is produced by a prepackaged process.
 - 4. A bag pack as recited in claim 3, wherein the prepackaged process comprises at least one of:
 - (i) a vacuum method;
- 15 (ii) a blown air method;
 - (iii) a drape horse method; and
 - (iv) a push rod method.

	5.	A bag pa	ack as recited in claim 3, wherein the bag pack is arranged in a
	packaged con	ıfiguration,	and wherein the packaged configuration comprises at least one of:
		(i)	a flat lay method;
		(ii)	a single roll method;
5		(iii)	a multiple roll method;
		(iv)	a pack-stack method; and
		(v)	a single-stack method.
	6.	A bag pa	ck as recited in claim 1, wherein at least a portion of the bag pack is
10	coupled to a s	supportive :	structure to place the bag pack in a usable position.
	7.	A bag pa	ck as recited in claim 6, wherein the supportive structure comprises
	at least one of	f:	
		(i)	a shell;
15		(ii)	a wall;
		(iii)	a cupboard;
		(iv)	a frame;
		(v)	a hook; and
		(vi)	a container.
20			
	8.	A bag pad	ck as recited in claim 6, wherein the supportive structure is one of:
		(i)	a disposable supportive structure; and
		(ii)	a reusable supportive structure.

9.	A bag pac	ck as recited in claim 1, wherein the plurality of bags are coupled to a		
single rim tha	nt is selectiv	ely coupled to a supportive structure.		
10.	A bag pa	ack as recited in claim 1, wherein each of the plurality of bags is		
coupled to a	correspondi	ng rim to form a plurality of inter-coupling rims.		
11.	A bag pag	ck as recited in claim 1, further comprising a coupling mechanism to		
selectively m	aintain the	plurality of bags in the nested configuration, wherein the coupling		
mechanism co	omprises at	least one of:		
	(i)	a perforation;		
	(ii)	a seam;		
	(iii)	an interconnecting device; .		
	(iv)	a weld;		
	(v)	a clip;		
	(vi)	an adhesive; and		
	(vii)	a cord.		
12.	A bag pac	k as recited in claim 1, wherein the first bag is a bag-set.		
13.	A bag pack as recited in claim 1, wherein the plurality of bags are one of:			
	(i)	disposable; and		
	(ii)	reusable.		

	mechanisms of	coupled to	each of the	plurality	of bags,	wherein	the	closure	mechanism
	comprise at least one of:								
		(i)	a cord;						
5		(ii)	a die cut;						
	·	(iii)	a draw string	;					
		(iv)	an aperture;			,			
		(v)	a patch handl	e;					
		(vi)	a peel seal;						
10		(vii)	a purse clip;						
		(viii)	a snap;						
		(ix)	a satchel;			ı.			
		(x)	a strap;						
		(xi)	a tassel;						
15		(xii)	a tie;						
		(xiii)	an interconne	ecting zipp	ing mecha	anism; an	d		
		(xiv)	a star seal.						

14.

A bag pack as recited in claim 1, further comprising one or more closure

15. A method for using one or more bags, the method comprising:

providing a bag pack, wherein the bag pack comprises a plurality of bags including a first bag and a second bag, wherein the plurality of bags are associated in a nested configuration such that upon extraction of the first bag from the bag pack, the second bag is automatically available for use;

placing the bag pack in a usable position; placing one or more items in the first bag; and extracting the first bag from the bag pack.

- 16. A method as recited in claim 15, wherein the step for placing the bag pack in a usable position comprises at least one of:
 - (i) coupling the bag pack to a supportive structure;
 - (ii) coupling a lid to a supportive structure, wherein plurality of bags are coupled to the lid; and
- (iii) coupling a set of inter-coupling lids to a supportive structure, wherein each of the plurality of bags is coupled to one of the inter-coupling lids.

- 17. A method as recited in claim 16, wherein the step for extracting the first bag from the bag pack comprises at least one of:
 - (i) tearing at least a portion of the first bag;
 - (ii) decoupling the first bag from the second bag at one of a seam, a perforation, and a weld;
 - (iii) pulling on a cord;

5

10

20

- (iv) unzipping the first bag from the second bag;
- (v) detaching the first bag from the second bag;
- (vi) untying the first bag from the second bag;
- (vii) unclipping the first bag from the second bag;
- (viii) decoupling a first inter-coupling lid of the inter-coupling lid set from a second inter-coupling lid of the inter-coupling lid set; and
- (ix) unsticking an adhesive.
- 15 18. A method as recited in claim 15, wherein the step for extracting the first bag from the bag pack comprises:

determining a desired bag strength for containing the one or more items; and if the desired bag strength is greater than a bag strength of the first bag, extracting the first bag with one or more additional bags of the bag pack to provide the desired bag strength.

19. A method for manufacturing a bag pack, the method comprising:

inserting a first bag into a second bag of the bag pack, wherein the bag pack comprises a plurality of bags including the first bag and the second bag, wherein the plurality of bags are associated in a nested configuration such that upon extraction of the first bag from the bag pack, the second bag is automatically available for use; and using a coupling mechanism to selectively maintain the nested configuration.

- 20. A method as recited in claim 19, wherein the step for inserting the first bag into the second bag of the bag pack comprises at least one of:
- 10

- (i) a vacuum method;
- (ii) a blown air method;
- (iii) a drape horse method; and
- (iv) a push rod method.

	21.	A method	as recited in claim 20, wherein the coupling mechanism comprises
	at least one of		
		(i)	a single rim;
		(ii)	a plurality of inter-coupling rims;
5		(iii)	a seam;
		(iv)	an interconnecting device;
		(v)	a weld;
		(vi)	a clip;
		(vii)	an adhesive; and
10		(viii)	a cord.
	22.	A method	as recited in claim 20, further comprising a step for creating a
	decoupling me	echanism.	
15	23.	A method	as recited in claim 22, wherein the decoupling mechanism
	comprises at le	east one of:	
		(i)	a perforation; and
		(ii)	a cord.
20	24.	A method	as recited in claim 19, further comprising a step for coupling the
	bag pack to a	supportive s	structure.

- 25. A method as recited in claim 19, further comprising a step for packaging the bag pack, wherein the step for packaging the bag pack comprise at least one of:
 - (i) a flat lay method;
 - (ii) a single roll method;
 - (iii) a multiple roll method;
 - (iv) a pack-stack method; and
 - (v) a single-stack method.
